## MAPpμ® | Backing Boards | Zuschnitte Fresh Packaging

EPS sheets made of foamed polystyrene are very light, however, they are also very rigid. Consequently, the product always keeps its form and the packaging stays stable, from the POS to the home of the consumer. silver plastics® EPS sheets are “food approved” and comply with all European regulations and general guidelines for food packaging.

EPS sheets are free of metal and mineral oil and can be processed without any difficulty. They are available with colour-printed lamination. This offers additional and innovative possibilities for after-sales marketing. EPS sheets are the ideal solution for the packaging of processed, cut food with a for all users. Especially for the packaging of smoked salmon, types of fish, silver plastics® offers backing boards that absorb

The even distribution of the liquids and the “binding effect” of the silver plastics® sheets make it possible for the packaging to be stored in a horizontal as well as in a vertical position. This enables the retailer to present the products in an attractive and appetising way – as an example: the customer sees the fresh fish and not the packaging!

### Possible Applications

for: fish meat cold cuts cheese etc.

**MAPpμ®**  
Soak pads

**Backing Boards**  
for fish

**Base Layers**

Observe restrictions regarding residual oxygen in the final packaging. Packing tests are required.
